

Case Study: University Academic Management System (UAMS)

System Context

Organizational Background

A university operates multiple academic programs (undergraduate, postgraduate).

The university plans to build a **centralized Academic Management System** to standardize operations and ensure regulatory compliance.

Functional Requirements

Core Features

- Student enrollment and profiles
- Course and curriculum management
- Semester registration
- Grade submission and GPA calculation
- Role-based access control

Non-Functional Requirements

- Data integrity
- Security
- Testability
- Regulatory compliance
